

# Optimal atomization for various applications.

16

### Airspray manual and automatic guns

Almost all coating materials can be processed with airspray guns. This includes not only paints and varnishes, but also adhesives, release agents, oils, etc. Electrostatic guns are available as versions for solvent and water-based paints. They ensure high transfer efficiency with reliable surface quality at the same time.

### High-speed rotation atomizer

With high-speed rotation atomizers you achieve an efficient coating for small workpieces as well as large surfaces. They are ideally suited for electrostatic applications with water and solvent-based paints.
